Section name references in LATEX*

Sebastian Rahtz (deceased) Heiko Oberdiek (maintainer) https://github.com/ho-tex/hyperref/issues

2016/05/21

Documentation overview for hyperref

The documentation for package hyperref consists of several files:

Manual The USER MANUAL (also available as HTML).

README The **README** file (also available as text file). Here information is collected that is not yet in the manual: new features, package compatibility, limitations, known problems, ...

ChangeLog This file records the version history (also available as text file).

Options This file provides a short option summary.

Bookmark talk, slides Slides for the talk "PDF information and navigation elements with hyperref, pdfTeX and thumbpdf" at EuroT_FX 1999.

Bookmark talk, paper The paper version of the talk.

Source code documentation:

hyperref.dtx This is the source code documentation for hyperref.

backref.dtx "Back referencing from bibliographical citations"

nameref.dtx "Section name references in LATEX" (this file)

Contents

1	Introduction	2
2	History	2

^{*}This file has version number v2.44, last revised 2016/05/21.

3	Imp	plementation			
	3.1	\label stuff	3		
	3.2	Changes of section macros	5		
		3.2.1 Class beamer	7		
		3.2.2 Theorems	8		
	3.3	Referencing stuff	8		
	3.4	Usage and frontend	10		
	3.5	Package ifthen support	11		
	3.6	Compatibility with varioref	11		
	3.7	Support for package listings	14		

1 Introduction

Cross-referencing to include the *name* of the section, rather than just the number or page. This works by redefining some of the inside LATEX macros, so it is vulnerable to future changes.

2 History

```
Sebastian Rahtz, for Lou Burnard, March 15th 1994;
SPQR CERN July 1994;
Last mod. Sept. 3th MG;
Sept. 19th SPQR;
April 11th 1995 SPQR (added section formatting hook);
April 14th 1995 SPQR (compatibility with hyperref);
June 22 1995 SPQR (removed typeout from Sectionformat);
September 22 1997 added varioref hacks by Corey Minyard;
September 28th changes by David Carlisle.
More recent changes are recorded in ChangeLog.
```

The versions before 2009/11/27 v2.32 did not expand the title strings (of \section, \caption, ...). Then the behaviour switched to expanding, because this allows to remove unwanted macros (\label, ...). Despite this method is used in package titleref and class memoir, the first feedbacks let me conclude that this is not robust enough. Therefore I wrote package gettitlestring that uses the non-expanding method as default. It also allows me to use this package in package zref-titleref. See the package documentation of package gettitlestring how to change the method. It also provides a hook to remove additional unwanted macros, not supported by the package. Example:

```
\usepackage{gettitlestring}
\GetTitleStringDisableCommands{%
\let\mylabel\@gobble
\renewcommand\myindex[2]{}%
}
```

3 Implementation

```
1 (*package)
2 \RequirePackage{refcount}[2006/02/12]
3 \RequirePackage{gettitlestring}[2009/12/18]
4 \RequirePackage{ltxcmds}[2009/12/12]
```

We redefine \label so that it also writes the name of the current section to the .aux file; if the name ends in a dot, we zap it. To allow for the hyperref package, also write fourth and fifth fields (empty by default; used for cross-ref name, and

\NR@strip@period

5 \def\NR@strip@period#1.\ltx@empty#2\@nil{#1}

6 \def\strip@period#1.\relax#2\@@@{#1}

\strip@period Macro \strip@period was removed in nameref 2012/07/28 v2.41 and reinserted in 2012/07/31 v2.42 for compatibility reasons with package subfig.

```

```

Changes of section macros 3.2

Add to the underlying section heading macros so that they note the section name for use by label.

If a section heading or the like has a \label in it, we need to extract it, or subsequent processing breaks.

```
\NR@gettitle
```

```
101 \def\NR@gettitle#1{%
102 \GetTitleString{#1}%
103 \let\@currentlabelname\GetTitleStringResult
104 }
```

First the numbered sections. While we are about it, put in a useful section formatting macro.

\NR@sect

```
105 \let\NR@sect\@sect
```

106 \newcounter{section@level}

\@sect

```
107 \def\@sect#1#2#3#4#5#6[#7]#8{%
108 \setcounter{section@level}{#2}%
109 \NR@gettitle{#7}%
111 }
```

and now the unnumbered ones

\NR@ssect

112 \let\NR@ssect\@ssect

\NR@ssect

```
113 \def\@ssect#1#2#3#4#5{\%
114 \NR@gettitle{#5}%
115 \NR@ssect{#1}{#2}{#3}{#4}{\Sectionformat{#5}{#1}}%
116 }
```

Support for class memoir.

              Referencing stuff
We default the label and hypertext reference to be empty.
272 \providecommand*{\@currentlabelname}{}
```

273 \providecommand*{\@currentHref}{}

Since the second part of the preserved reference now has five parts (number, page, name, hypertext reference and file), we need extra utility macros:

```
\@firstoffive
                 274 \long\def\@firstoffive#1#2#3#4#5\{#1\}
   \@secondoffive
                 275 \long\def\@secondoffive#1#2#3#4#5{#2}
     \@thirdoffive
                 \@fourthoffive
                 277 \long\def\@fourthoffive#1#2#3#4#5\{#4\}
         \@offive
                 We have to redefine \ref and \pageref to know about extra reference elements.
                 Make them robust, and compatible with Babel. The Babel switch is mimicked if
                 not already defined. Some support for package showkeys is implemented. If option
                 notref of that package is set, \SK@ref has the meaning of \@empty.

3.5 Package ifthen support

Package if then's \isodd does not work with \pageref because of the extra link and the star form. Therefore we need an expandable variant.

Unfortunately there is no hook in \ifthenelse in order to provide expandable versions without link of \ref and \pageref. As possible target I could only find \begingroup:

```
358 \@ifpackageloaded{ifthen}{%
359
    \let\NROrg@ifthenelse\ifthenelse
360
    \def\ifthenelse{%
     \let\begingroup\NR@TE@begingroup
